OPTISONIC 6300 variants

The OPTISONIC 6300 is an ultrasonic clamp-on flowmeter that can be fitted on the outside of piping to measure the flowrate of liquids. The flowmeters consists of a combination of one or two OPTISONIC 6000 clamp-on sensor(s) and one UFC 300 ultrasonic flow converter.

OPTISONIC 6000 + UFC 300 = OPTISONIC 6300

OPTISONIC 6000 clamp-on sensors

- ① Small: chemical addition applications, cooling circuits
- ② Medium: purified water applications, hydrocarbons
- ③ Large: all water applications, especially for large pipe sizes

UFC 300 ultrasonic flow converter

The UFC 300 with standard **basic I/O** covers almost all applications, having 4 I/Os:

- active/passive current output (+HART®)
- passive pulse/status output
- passive status output
- passive status output / control input

The I/O-module combination is thus 1-0-0 (see above).

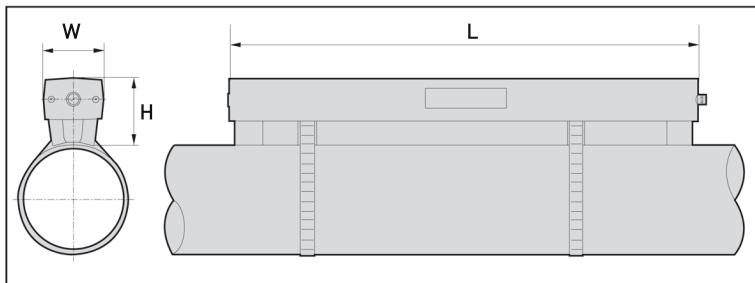

The UFC 300 with **modular I/O** can be tailor-made to any application:

- Suppose you require a converter with passive pulse output and 3 passive current outputs. The I/O-module combination then becomes B-B-B.
- Suppose you require a converter with 2 active pulse/status outputs. The I/O-module combination then becomes either 4-C-8 or 8-C-8 (depending on whether active or passive current output is required). The latter '8' indicates that 1 additional module can be added in future.
